

How to add a par value

Embed Toolkit v7

Setting a par value works with our Rapid Reorder™ program, allowing your Embed system to load a cart based on the previous week's scanned out items vs. your par values. The general rule for setting a par is 1.5x merchandise quantity, but every center is different and must be monitored closely. More information can be found in our Operational Toolkit at go.redemptionplus.com/operationaltoolkit.

1 | Open the Stock Details menu in Guru. Select Stock Maintenance.

2 | The yellow column marked Reorder Level is where you add your pars. Simply click the field, enter your values, save changes and close.

The screenshot shows the 'Stock Details' window with a table of inventory items. The 'Reorder Level' column is highlighted in yellow. A red arrow points to the 'Close' button in the top left corner of the window.

Stock Location	Product Id	Product Name	Category	Class	Redemption Item	Quantity	Comment	Vending Price	Ticket Value	Unit Cost	Reorder Level	En
